Managed Security Services

To ensure your environment is truly secure, your security should be an integral part of your system's design. By implementing fundamental and effective control and accountability features, you can significantly minimise the security risk to your system.

Security Alliance will help you design, procure, install and test a cost-effective security architecture which will protect your network and ensure your data stays safe. In particular, we can enhance the security of your LAN, WAN, intranet, extranet or web site system architecture. By implementing a well-designed security architecture, you'll establish and maintain the integrity of your organisation's information infrastructure.

Features of our Security Architecture Review include:

- Host and network-based intrusion detection solutions.
- Active content monitoring and filtering.
- Remote and network authentication solutions.
- Anti-virus and anti-malicious software solutions.
- Host and network vulnerability scanning solutions.
- File and session encryption authentication solutions.
- PKI and digital certificate applications.
- Virtual private networks.
- Secure email applications.
- Firewall solutions.
- System integrity monitoring.

Security Policy Review

Once you've understood your security implications and identified the risks you face, we then recommend that you put in place policies which will effectively manage those risks.

We will deploy trained and seasoned information security policy analysts to read through your existing policies to identify duplication and gaps. We will then create clear, concise and effective corporate network and end-user security policies which will protect the integrity of your business. And we will also ensure that these policies counter the specific threats identified in a risk analysis.

Typically, we will include policies which cover:

- Acceptable Encryption
- Acceptable Use
- Analog/ISDN Line
- Anti-Virus Process
- Application Service Provider
- Application Service Provider Standards
- Acquisition Assessment
- Audit Vulnerability Scanning
- Automatically Forwarded Email
- Database Credentials Coding
- Dial-in Access
- DMZ Lab Security
- Email
- Email Retention
- Ethics
- Information Sensitivity
- Internal Lab Security
- Internet DMZ Equipment
- Password Protection
- Personal Communication Device
- Remote Access
- Remote Access - Mobile Computing and Storage Devices
- Risk Assessment
- Router Security
- Server Security
- Server Malware Protection
- The Third Party Network Connection Agreement
- VPN Security
- Wireless Communication

Security Alliance has selected Orthus for security architecture reviews as part of its complete portfolio of market-leading information security services from specialist providers.

Orthus is one of the leading UK-based providers of information security services, assisting enterprises in securing their digital information globally. It specialises in the design of innovative and effective solutions using highly-trained and experienced information security professionals. The key value it brings to our customers is an independent assurance of the reasonable protection of information assets, ensuring revenue streams and business integrity remain intact.
