

Security Alliance provides a complete portfolio of world-class information security services.

Website, application and source code testing

Securing your business
against intruders

Your websites and software applications are a critical and fundamental part of your business. Unfortunately they can also offer an open door to intruders. If you haven't secured them effectively, you are exposing yourself to a variety of potential dangers, including identity theft, fraud, financial loss, failure to meet regulatory requirements, brand damage, and customer dissatisfaction and defection.

Security Alliance offers proven and cost-effective penetration testing of your websites, applications and source code, to identify any vulnerabilities, and to enable you to plug those gaps.

For this critical area of security, we deliver quality and expertise plus all the economies offered by remote offshore web site and application testing. Our fully-managed security testing and certification programmes reduce your ongoing exposure to security risks and increase your ability to exploit the internet further as a secure low-cost channel.

Our security testing services offer:

- **Certification:** we offer a stringent certification programme which helps to demonstrate to your customers and other stakeholders that your web applications meet – and continue to meet – the most exacting testing criteria and are resistant to attacks.
- **Exhaustiveness of testing:** we check web sites, applications and code against a comprehensive set of vulnerabilities and threats, as well as through a custom-developed threat profile for your application. Our testing service is far more exhaustive than any automated tool-based testing.
- **Consistency:** we follow a rigid testing process developed to the highest levels of quality assurance. We continually benchmark our process against industry standards, adding new vulnerabilities and attack methods as they evolve.
- **Value:** we deliver the highest-quality testing service, provided by experts, but with all the value expected from using offshore testing centres.

Security Services

- **Accessibility:** our unique online portal gives you ease of access to our management dashboard, to review progress, access reports and gain the latest information on threat levels across your universe of applications and networks.
- **Speed:** many customers want quick results to ensure fast mitigation. Our highly-streamlined testing processes deliver faster results while still maintaining exhaustiveness and accuracy. And, through globally-distributed operations, we can schedule tests quickly and respond immediately to client demands.

Our application security assurance programme follows a tried and testing process:

Security Alliance has selected Plynt for penetration testing services as part of its complete portfolio of market-leading information security services from specialist providers.

Plynt is a leading global provider of security testing. It offers a full range of cost-effective testing services for web sites, applications and networks. Plynt is the security testing division of Paladion, which has been recognised by Deloitte as the fastest growing information security company in Asia. Plynt combines in-depth security expertise with the economies gained by using highly-skilled offshore testing centres to create award-winning security programmes for its clients
